# ***FUGITIVE EMISSIONS OPERATOR TRAINING***

## ***Course #395***

This course presents background and field procedures for conducting fugitive emissions monitoring at refineries, marketing terminals, and oil and gas production facilities. The emphasis is on understanding and following uniform and consistent methods based on guidelines approved by state and local air quality agencies. The use of VOC leak data to develop facility emissions inventories will also be discussed. Successful completion of this course will satisfy *one* of the requirements for operator certification at air pollution control districts that require such certification.

Portable hydrocarbon analyzers will be used in class. If you have access to one, please bring to the course as this will facilitate in-class demonstrations.

**Enrollment fee of \$125 payable by check or money order to California Air Resources Board. Credit card payments also accepted by phone.**
